

THE PROBLEM

A pile of counter-drone devices is **not a system.**

Threats arrive faster, cheaper, and in greater numbers than any single operator can assign, deconflict, and adapt to by hand.

3×

annual growth in incursion reports

<90s

from detection to impact

6+

sensor / effector types to coordinate

THE SOLUTION

One coordinating intelligence

Place

Reads the site and recommends where every sensor and effector should go for full 360° coverage.

Assign

Matches the right effector to each threat in real time and deconflicts fire so nothing is wasted or double-engaged.

Adapt

Learns the threat's approach and re-tasks the layout wave over wave — the site gets smarter as the fight goes on.

HOW IT WORKS

Sense → Decide → Act, in one loop

01

Sense

Radar, RF-DF, and EO/IR feeds fuse into one track picture.

02

Decide

The brain scores every effector-vs-threat matchup and picks the optimal assignment.

03

Act

Effectors engage on command, deconflicted, with the odds shown live.

THE PROOF

Coordination wins, measurably

98%

threats neutralized
(coordinated)

WHY US

Legacy stack vs. AEGIS-1

CAPABILITY	LEGACY POINT SOLUTIONS	AEGIS-1
Effector-to-threat assignment	Manual, operator-limited	Automatic, optimal
Fire deconfliction	None	Built in
Adapts to the threat	Static	Wave over wave
Setup time	Days	Guided, minutes

WHERE IT RUNS

One system, every site

Forward Operating Base

Balanced defense, 360° coverage.

International Airport

Zero-tolerance airspace, no shutdowns.

Power Substation

Fragile high-value asset, jam-resistant threats.

Stadium · Event Day

Dense swarms, area effectors shine.

Let's defend your airspace.

See AEGIS-1 live at your site.
